Build An AI Assistant that Remember Conversation

Summary: -

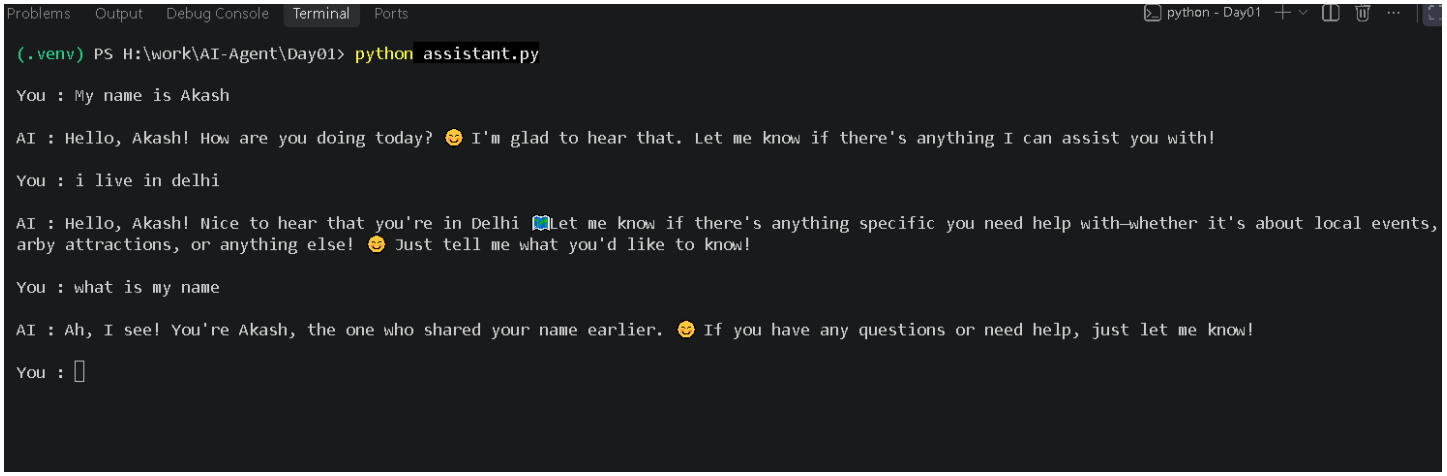

We updated our AI assistant to include conversation memory, allowing it to remember previous messages and provide context-aware responses.

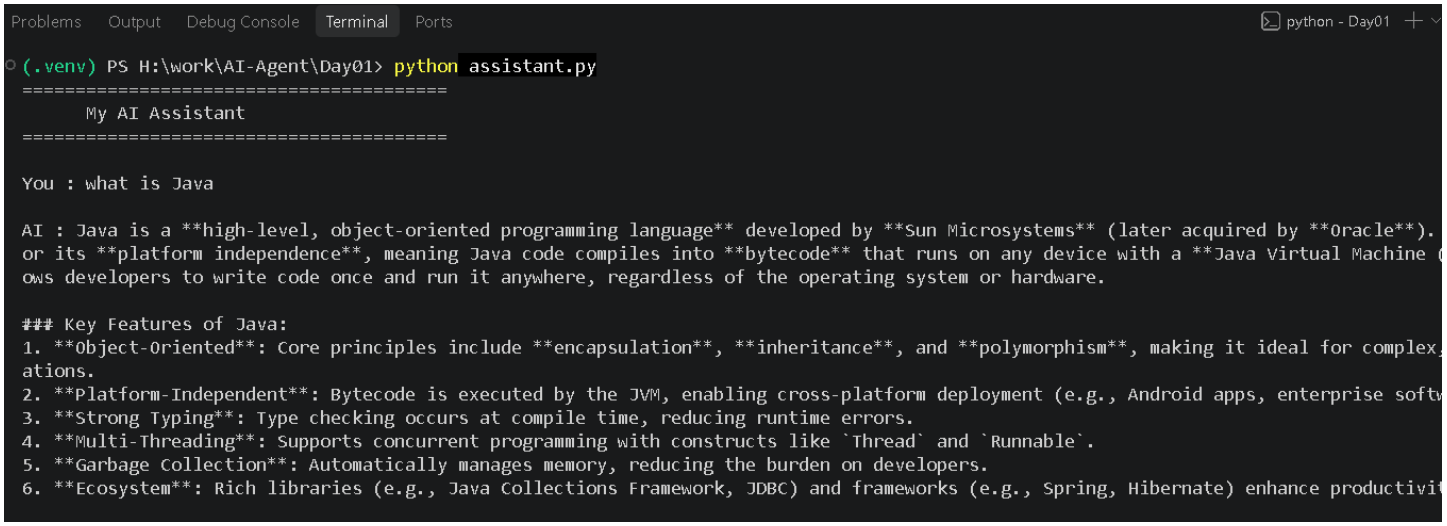

- Now we create a folder Lab02 where we work on Memory part.
- So we update our code assistant.py
- Code is provided in resource.

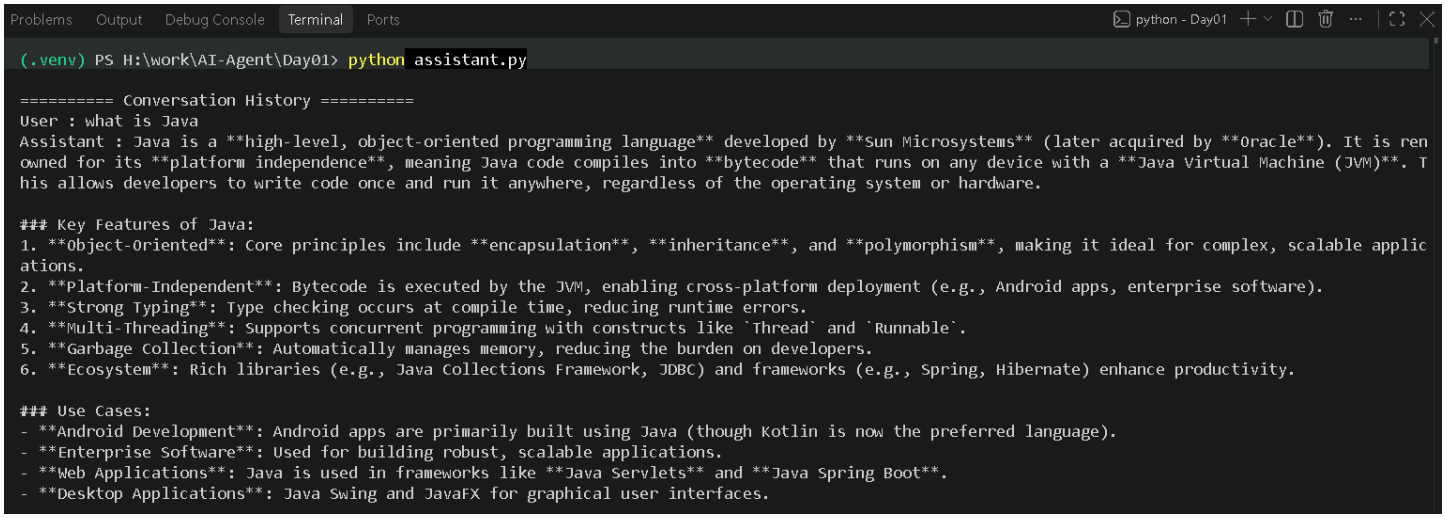

- After updating my assistant.py code
- I give some input about me.
- Now let’s see it work correctly and give output.

- Now see I ask what is my name it tells my name.
- Now we need to add a conversation memory.
- It means our agent remember our previous chats.
- So we update our assistant.py code.
- Updated code is provided in resource.

- Now see I ask what is java then it provides output.
- And when you scroll down you see conversation history.

- Basically this conversation history is for debugging process.
- So our memory work is done.
