Build Your First AI Agent

Summary: -

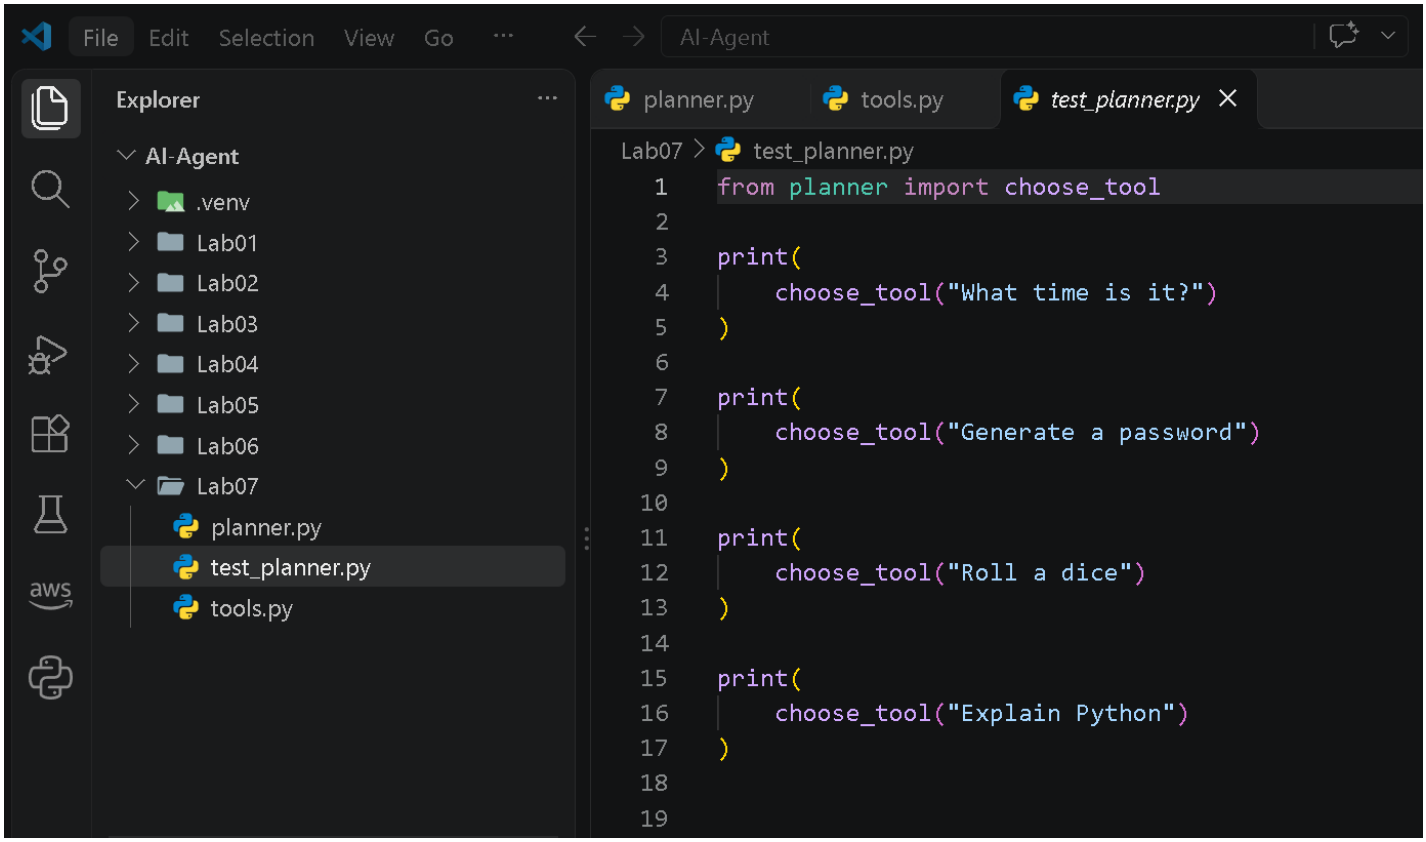

We built an AI Agent using Python and Ollama that can understand user requests, select appropriate tools, and perform tasks like checking the current time, rolling dice, and generating passwords.

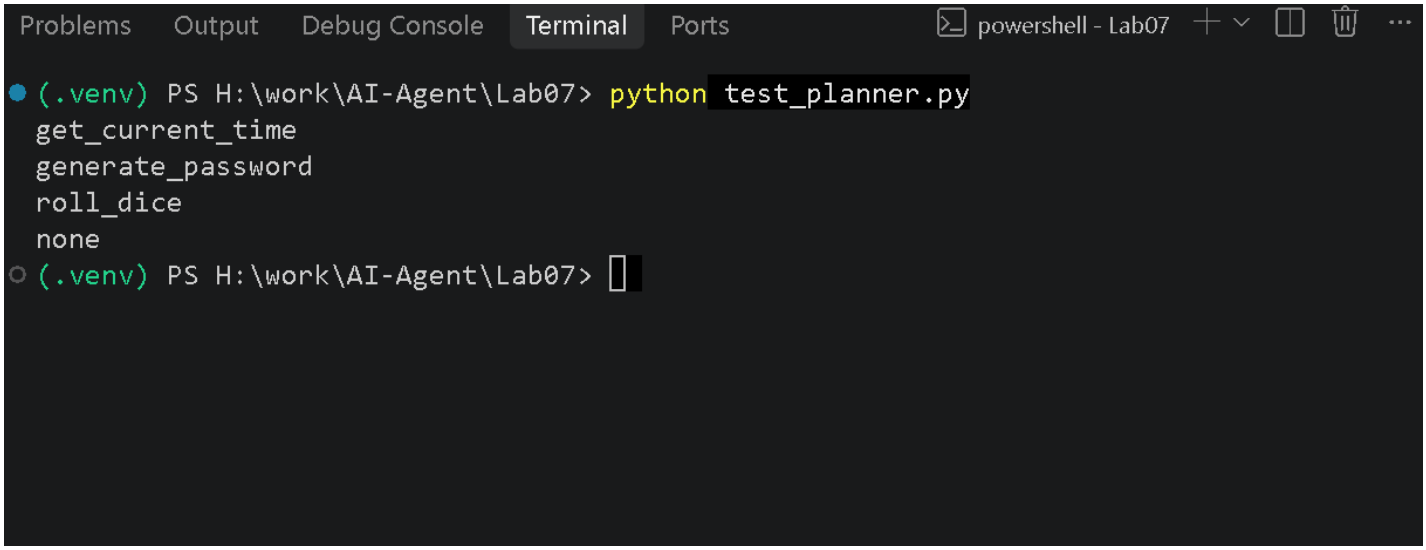

- Now create Lab07 and create a file planner.py

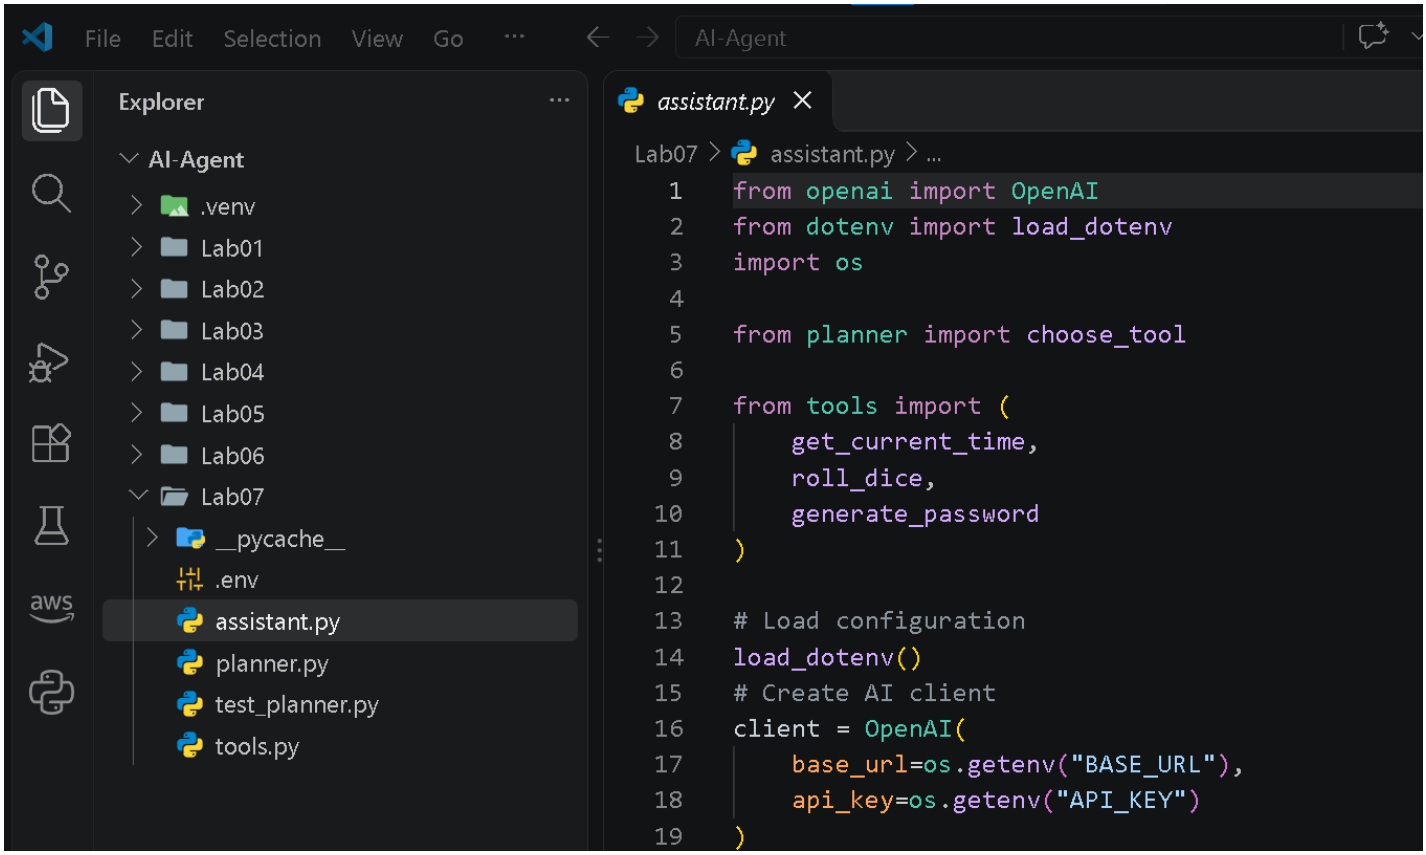

- Now we create two files one is tools.py and test_planner.py
- In tools.py we have two three tools one for check date and time.
- One is use to generate random number.
- And third one is to generate password.

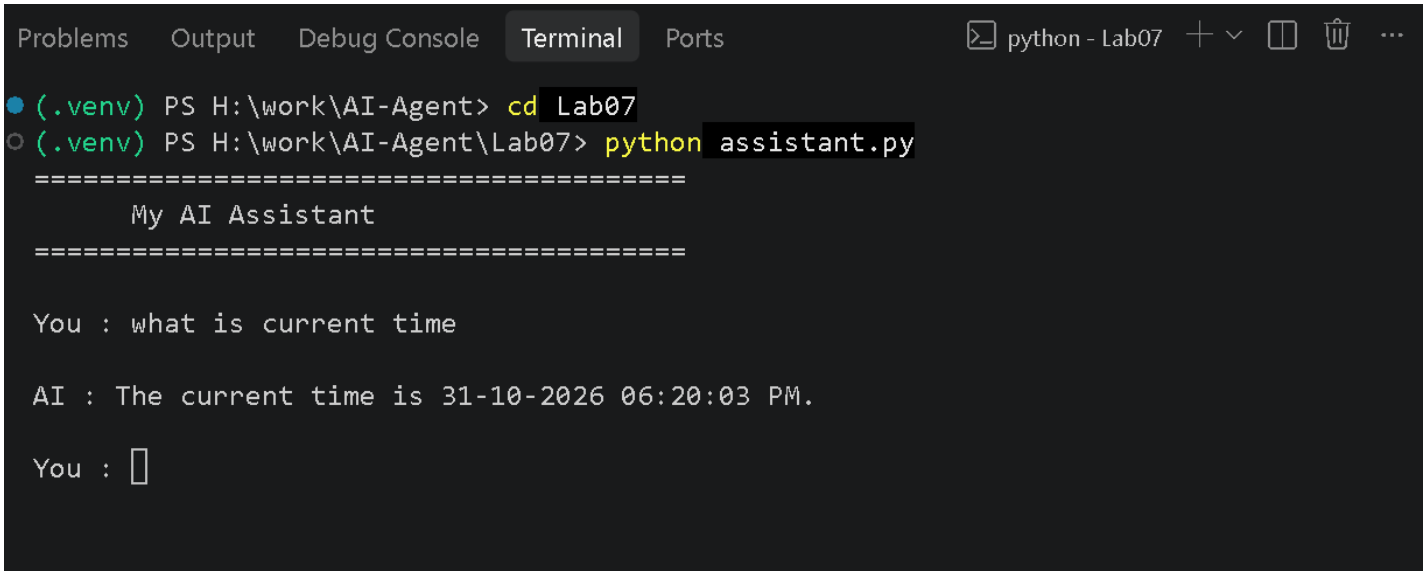

- And test_planner.py is created to run the planner.py
- Now let's check its working or not.

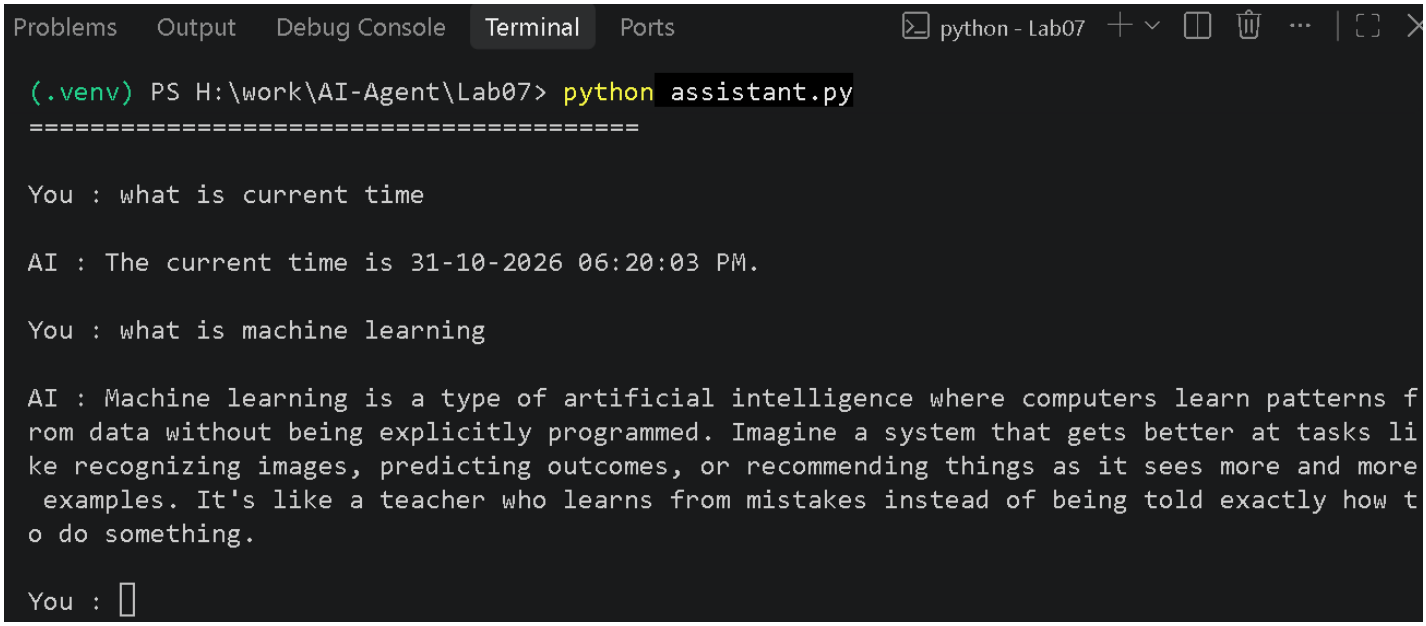

- Now you see it choose the tools that we asked.
- Now connect our planner to our Assistant.

- Now We add Assistant.py file.
- But our assistant work only on that tools that available to planner.
- If any information is not available it return none.

- Now it working.
- What if I ask any other thing from our Assistant.
- It will return from LLM.

Problems
Output
Debug Console
Terminal
Ports
python - Lab07
(.venv) PS H:\work\AI-Agent\Lab07> python assistant.py
==
You : what is current time
AI : The current time is 31-10-2026 06:20:03 PM.
You : what is machine learning
AI : Machine learning is a type of artificial intelligence where computers learn patterns f
rom data without being explicitly programmed. Imagine a system that gets better at tasks li
ke recognizing images, predicting outcomes, or recommending things as it sees more and more
examples. It's like a teacher who learns from mistakes instead of being told exactly how t
o do something.
